 Portfolio  Leetcode

EDUCATION

Bachelor of Computer Science

American College of Technology 

03/2023 – Present
Addis Ababa, Ethiopia

Relevant Coursework: Advanced Database, Data Structures & Algorithms, Web & Mobile Development, Machine Learning & AI, Distributed Systems, Operating Systems & System Programming

Key Skills & Experience:

- Built full-stack applications with responsive front-end web design (HTML5, CSS3, JavaScript, React) and modern backend development (Node.js, Python, REST APIs)
- Applied DevOps practices including version control (Git), CI/CD pipelines, containerization (Docker), and basic cloud deployment (AWS/GCP)
- Developed cross-platform mobile applications with a focus on performance, UI/UX, and offline data sync
- Designed and implemented distributed system components, multithreading, and inter-process communication in system programming projects
- Leveraged machine learning models and data processing pipelines for AI-driven features in academic and personal projects

PROFESSIONAL EXPERIENCE

LLM Model Trainer and Data Annotator

Turing

07/2025 – 11/2025
Remote

- Trained LLMs by manually annotating video data and writing precise, time-frame-level descriptions to help the model understand context and actions per second
- Shifted from model trainer to data annotator to improve training data quality, ensuring the AI learns accurate temporal patterns
- Tested model responses by designing prompts and verifying output correctness against expected behavior, closing the feedback loop for continuous improvement

Frontend Developer

Upwork

03/2025 – 05/2025
Remote

- Developed a high-performance frontend for the Chessline website using Next.js, ensuring fast page loads and smooth navigation
- Translated the company's design vision from Figma into a fully responsive, pixel-perfect layout
- Implemented SEO best practices (meta tags, structured data, performance optimization) to improve search visibility
- Fixed cross-device responsiveness issues, delivering a consistent user experience across desktop, tablet, and mobile

AI Infrastructure & DevOps Training Engineer

Revelo

03/2026 – 06/2026
Remote

- Worked at Revelo on Infrastructure as Code (IaC) and AI training tasks focused on improving the reasoning and code generation capabilities of Amazon Nova Lite v2 models.
- Created and evaluated complex technical tasks involving YAML, JSON, Python, AWS CDK (Java), Terraform, and cloud infrastructure workflows.
- Designed high-difficulty prompts, validation scenarios, and infrastructure configurations to train and benchmark AI systems on real-world DevOps and cloud engineering problems.
- Contributed to improving model accuracy in infrastructure automation, configuration management, and cloud deployment reasoning.

PROJECTS

YCube Tech Blog

Full-stack PHP blogging platform

- Built a full-featured tech blogging platform using PHP with user authentication and session management
- Implemented server-side rendering and backend logic to handle blog posts, comments, and user roles
- Applied core web development concepts, including form handling, database integration, and secure data validation
- Strengthened backend development skills by applying everything learned in the web development course

Gebeta Game

Traditional Ethiopian mancala game built with JavaFX

- Developed a traditional Ethiopian mancala game using Java with JavaFX for the graphical interface
- Applied solid OOP principles, including encapsulation, inheritance, abstraction, and polymorphism
- Designed game logic for two-player turn-based play, capturing rules, and score calculation
- Implemented an intuitive UI with interactive plots and score displays for a smooth user experience

Chessline Web App

Chess learning web app with Next.js and Tailwind CSS

- Contributed frontend components for a chess learning web application using Next.js and Tailwind CSS
- Worked as an assistant developer on a production team, collaborating on real-world development workflows
- Implemented responsive UI components to enhance user engagement and learning experience
- Gained hands-on experience with version control, code reviews, and production-level frontend practices

Wedding Website

Wedding invitation and RSVP website with Next.js and Firebase

- Built a beautiful wedding invitation and RSVP website using Next.js and Firebase
- Integrated Telegram notifications for real-time alerts when guests submitted RSVPs
- Deployed the site successfully for a real wedding celebration with active guest usage
- Managed event data and guest responses securely using Firebase Firestore and authentication

SKILLS

Frontend Development

Next.js, React, Tailwind CSS, HTML5, CSS3, JavaScript

Backend Development

Node.js, Python, REST APIs, PHP, Firebase (Firestore, Auth)

DevOps & Cloud

Git, CI/CD pipelines, Docker, AWS/GCP (basic deployment)

Programming Languages

Java (JavaFX), PHP, Python, JavaScript

UI/UX & Design

Figma translation, responsive design, SEO, performance optimization

Databases

Advanced Database Concepts, Firebase Firestore

Data Annotation

Video annotation, temporal pattern labeling, model testing

Machine Learning & AI

ML models, data processing pipelines, LLM training, prompt design
